North Metro   Average and peak swing service volumes in the North Metro sub-network were at relatively low levels for the month of February 2022 with the exception of a major spike on gas day 28 February. This was due to mismatch between pipeline injection and total user pipeline nomination amount (UPNA). APA has issued a clause 255 Special Circumstance notice on 1 March 2022.
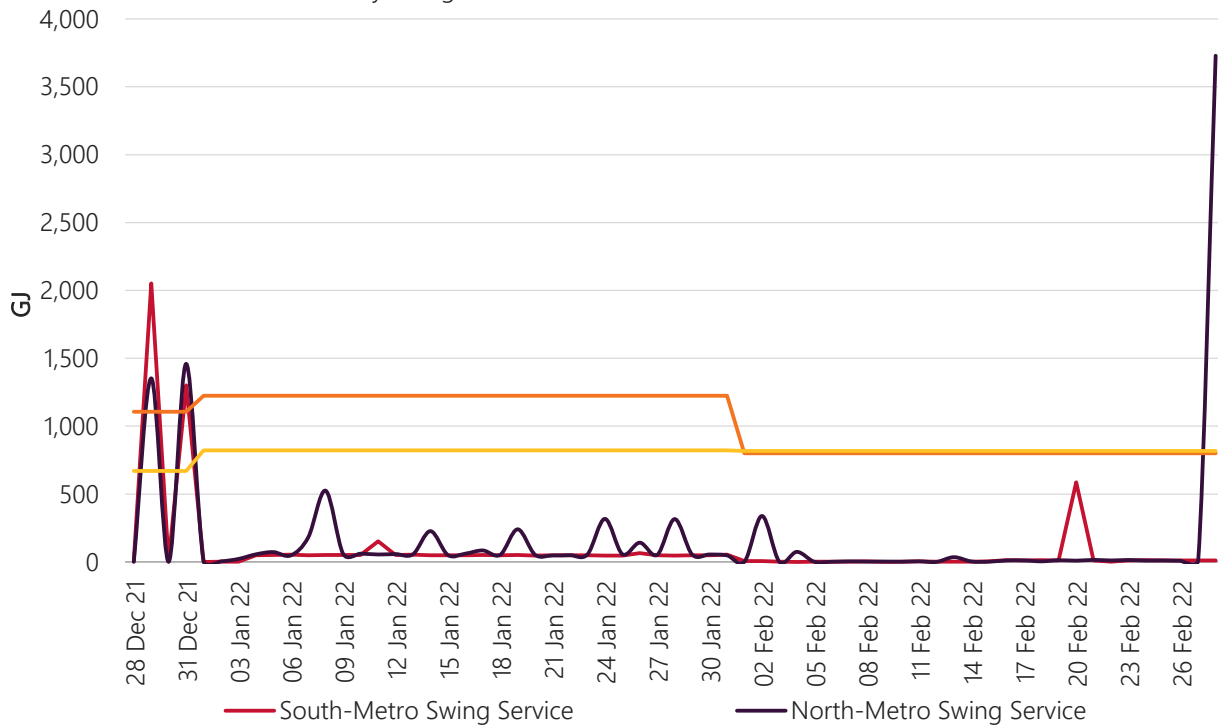

South Metro   Average and peak swing service volumes in the South Metro sub-network were at relatively low levels for the month of February 2022 with the exception of a moderate spike on gas day 20 February. This was due to mismatch between pipeline injection and UPNA. The mismatch was caused by a revised UPNA after the start of the gas day.

13 Month Swing Service Results

Daily Swing Service Volumes for a Two Month Period

Terms:

- Peak SS means the maximum amount of Swing Service recorded on a day during that month.

- Average SS means the average amount of Swing Service for any day in that month.

- Peak Trend is the linear trend of the Peak SS data, using the least squares method.

- Average Trend is the linear trend of the Average SS data, using the least squares method.

- Tolerance Band is a marker – AEMO will investigate and report on any Swing Service spikes that are larger than the Tolerance Band. The Tolerance Band is defined as a volume equal to the mean amount of Swing Service over the last 2 years plus 3 standard deviations.
